SUMMARY

Experienced software engineer with years of experience architecting scalable full-stack applications and cloud infrastructure. Proven track record of leading development lifecycles, optimizing deployment pipelines, and building robust APIs. Passionate about driving technical strategy and delivering high-impact, user-centric software solutions across multidisciplinary teams.

EXPERIENCE

Software Engineer | Comcast | Nov 2022 - Present

- Created core components of DefectSense, an internal AI agent that triages bug reports from Slack by searching Jira for known duplicates, extracting context from linked tickets and logs, and using LLM analysis to identify likely root causes from user-submitted logs. Adopted by QA and engineering teams across the global product organization.
- Built test automation frameworks covering full UI behavior and backend APIs across multi-device ecosystems, catching regressions and accelerating releases for Xfinity, Rogers, and Sky platforms.
- Developed tooling that auto-generates SDKs from OpenRPC specifications, producing JavaScript and C++ SDKs and replacing manual SDK maintenance with a spec-driven workflow.

Software Engineer | Passport | Jan 2022 - Oct 2022 (Contract)

- Built a redesigned permits dashboard in React that let customers purchase and manage permits and handle multiple reservation types, backed by Node.js APIs and AWS serverless services.
- Developed event-driven email templates that send customers confirmations for reservations, cancellations, and other permit changes.
- Maintained 90%+ code coverage across the Permit team's codebases using test-driven development.

Software Developer/Technical Lead | MacguyverTech | Jul 2020 - Jan 2022

- Progressed from Software Developer to Technical Lead, guiding a team of four developers through the full development lifecycle, from client requirements through deployment.
- Delivered custom solutions for a range of small and mid-sized business clients, including a security badge-tracking dashboard, a reservation and booking website, various bookkeeping and CRM platforms, and e-commerce storefronts.
- Automated application deployments to cloud servers using GitLab CI/CD, with process management to keep services running and automatically restart them after server interruptions.

SKILLS

Languages - JavaScript, TypeScript, Python, Rust, C++, Dart, HTML, CSS

Frameworks & Infrastructure - React, Vue, Node, SQL, MongoDB, Cloud (AWS, GCP), Docker, REST APIs, Microservices, Serverless, CI/CD (GitHub Actions, GitLab CI, Concourse)

AI & Testing - Anthropic API, AI agents, Playwright, Cypress, Pytest, Jest, UI and API test automation

EDUCATION

Rutgers, The State University of New Jersey | Bachelor of Science | 2014 - 2018

University of Pennsylvania | Full-Stack Web Development Professional Certificate | 2019-2020
